Subjects and Predicates

Bow to Pennsylvania

No, Middlebury doesn't have the oldest alumnus in America, in spite of what the College, the Associated Press, and a few hundred newspapers from Maine to Missouri and from Vermont to Vancouver conjectured last December. The tip that there might be an elder came from someone in California. He suggested that we investigate the University of Pennsylvania. And surely enough, in immediate response to a query there, we learned that Dr. William Guilford of Lebanon, Pennsylvania, is 104, that he graduated from the School of Medicine at Pennsylvania eighty-four years ago.

Alas, our Edward W. Wilcox, '54, is only 102 and out of college only 82 years. The two centenarians evidently entertain entirely different attitudes toward their distinctions. Dr. Guilford claims he doesn't want any more birthdays; 104 are quite enough. Mr. Wilcox looks forward to many another and in the meantime relishes his daily constitutional of one mile. Both served in the Civil War, Mr. Wilcox with the Confederates and Dr. Guilford with the Union, the latter patching up the men disabled by the side of the Middlebunan.

Jersey Correspondent

Bernard De Voto, editor of the Saturday Review, has said all there is to say about the subject of literary anonymity: "As for writers of anonymous letters to the editor, they know what they can do. If they do not, let them supply name and address and the editor will be happy to tell them."

We were thoroughly humbled by an anonymous communication that came by return mail from Newark, N. J. after the publication of the last "New Letter" which contained the phrase "the balance of these letters." The second edition of Webster's unabridged is our accepted authority—here in Vermont. See page 3210.

"Balance. 9. The remainder, the rest. Colloq. Presently I began to receive letters asking for the rest of it, sometimes for the balance of it." Lowell.

Mr. Fowler in "The Dictionary of Modern English Usage" published in England with a British accent, calls the expression "far fetched, though not impossible."

We don't mind being colloquial or even far fetched occasionally, but we do hate anonymous letters. We accept the reprimand from Mr. Webster, Mr. Fowler, and Miss New Jersey and will hereafter use the word only in one of its other twenty-four meanings.

If Sadie Could Talk

Despite the annual plebiscite on the most popular coeds, prom queens and carnival queens there is inevitable ruction in the men's college over the returns, but there never has been or will be any contention over the least popular lady on campus. Her skeletal remains are known as Sadie and she has lived on the second floor of the Warner Science Building for generations. She was 65 or 70 when she died—no one knows how long ago—and "Longy" (Professor Samuel Longwell), her custodian, estimates that 1710 students in the past eighteen years have studied every contour in her unshapely remains, and unpopular as she has been among these "General Bug" and "Comparative Anat" students, many an alumnus returns to Middlebury with an appeal to view the old lady once more—for sentimental, not scientific reasons.

Sadie's teeth, feet, and vertebrae indicate that she had a hard time in life, but she's had a harder time in her physical hereafter. Outside of the annual humiliation of being compared with frog, cat, fowl and guinea pig skeletons, she has suffered plenty at Hallowe'en parties, stunt nights, fraternity goings on, and more than once she has hung from laboratory windows for the benefit of passing coeds. Professor Barney intimates that her last trip must have been a brawl, for she returned with several broken ribs, her posterior zygapophysis in pretty poor shape, and she probably has sacroiliac pains. Occasionally she is found gripping a dead cigar in her teeth, carrying a parasol, or modestly wearing a loin cloth.

Where she came from, who she was, where she will go next is anybody's conjecture, but a number of bandages and taped parts indicate that she will shortly be laid out again for repairs.

Bread Loaf—Summer

Alumni literati and disciples of Letters who haven't in the past been beckoned to Bread Loaf may find it less
easy to resist the call in future summers. Rather sweeping developments at the English School are being plotted by Harry G. Owen, '23, new Director and successor to Dr. Gay.

Back in 1928, Professor Davison sketched his plan for Bread Loaf, past, present, and future: "We believe in creative work because we believe that only so can the great literature of the past and the present come alive in the minds and hearts of teachers and students everywhere. And to have literature come alive, to have writing come alive, to have speaking come alive—that is our aim. An eager, developing, creative attitude of mind that shall precipitate in expression and in appreciation of the expression of others—that, so far as it can be phrased in a word, is the Bread Loaf idea."

Director Owen is reviving this original idea and adding to it a series of new ones which have been made possible by the increased enrollment at the School and which bear out that original idea. Four seminar courses in writing will be given next summer. The curriculum will be enlarged to include courses in criticism, in American sectional literature, and in comparative literature with cooperation from the other language schools. Attempt will be made to integrate the entire curriculum in order to show the relation of the various arts to literature and in comparative curriculum in order to show the relation of the various arts to literature and in comparative

Bread Loaf—Winter

While big things were being planned on paper for Bread Loaf's summer, as big things to the winter sports world were getting underway for Bread Loaf's winter. The College, the village, the Middlebury Inn, the Rotary Club, the Chamber of Commerce and the United States Government had all joined forces to establish a real skiing center just north of Bread Loaf Inn in the 120 inch snow zone. Included in a long range project are a 35 meter jump, ski tow, two cabins, parking area, and ski trails for both novices and adepts. The development will be used as a supplement for the equipment on Chipman Hill, which, we are told, is in the 80 inch snow zone. According to ski coach "Dick" Hubbard, '36, one speed trail with a drop of 1000 feet in a mile should be just about as good as anything on Mount Mansfield, while the Burnt Hill trail will offer for novices a pleasant drop of 1400 feet in a two mile run. Though the roast proved null and void this winter, weather and ski experts guarantee snow from the middle of December to the middle of April. We expect you'll be on the first Bread Loaf snow train out of Boston or New York.

Jack of the Dog Cart

Town night life in Middlebury never has been especially exhilarating or exhausting. After the Opera House closed down at 10:30 or 11:00 social night owls had a choice of whiling away late hours with a rousing game of cribbage in a neighbor's parlor, having a ginger ale and nabisco at a soda joint, and topping off the evening perhaps with a dollar's worth of bagatelle at the Inn. Times have changed. Local laws, and eyebrows still limit beverage sales to light wines and beers—but beverages figure lightly in Middlebury entertainment anyway. The fast set has at last come into its own and found a place for public blasphemy of Morpheus. It's the Dogcart. There isn't a floor show—no comedian, not even an orchestra—only a master of ceremonies Jack Swanson. Even the clientele varies from night unto night. But at Jack's Dogcart (the Val-do-mar Diner to the elect) the great, near great and less great—venerable professors, truck drivers, ministers of the gospel, Starr Hall freshmen, the press, janitors, doctors, bootleggers—all join disjointedly in scintillating conversation, sparkling wit of the street, ponderous argument on political subtleties over the clinking glasses of—crackers and milk.

Jack began his Middlebury reign nine years ago. Until then the south end of Main Street was rather dull, socially. Jack proceeded to salt and pepper the district properly. From the first, college students, both male and female, made the Dogcart their rendezvous for pasturage. Depression cut heavily into the business. Rumors keep filtering into Vermont that things are picking up further south, but Jack still estimates that his student trade is a third of what it was back in '28 and '29. It's a cash establishment but he always has about $300 on the cuff from students and always collects it. Toasted Hamburges and coffee are invariably the favorite college munch—offering sharply from the Vermonter's favorite, roast pork, roast pork always—in season and out.

He is ready for any kind of trade, as his bill indicates. Before coming to Middlebury he assembled a variety of experience which put him in good stead here—experience varying from cooking jobs in universities to cooking jobs in lumbercamps. Past patrons still champ for his dishes in Florida, New York, Illinois, and Louisiana where he has worked. He has always prepared his own food and still serves...
his wife and two youngsters. He also employs and feeds five assistants including two students earning their way through college.

Although Jack puts in a sixteen-hour day he still finds time for his favorite recreation of hunting and running a column in The Register entitled "Notes from Forest and Stream." He is Middlebury's crack huntsman. Foxes are his favorite fur, and partridge or woodcock his favorite feather.

The saddest day of his year is Commencement. He's afraid the black-gowned students whom he has nurtured will never come back, but some dark night they always do—for a hamburger and coffee.

N O B O D Y knows just how it was done, but the annual Winter Carnival was run off as scheduled, and according to post mortem reports it was the most successful week-end celebrated at Middlebury in some time. Which merely bears out the old saying, that last tenacious foothold of the confirmed optimist, "adversity is the best road to success."

Contrary to the usual procedure, the week started on Monday at Middlebury, for on Monday the white angel of hope descended during the dawn hours and left a glorious trace of her visit, one inch and a half of snow. It wasn't much but it was enough, and it must have looked like quite a lot to the ten snow-starved ski teams that shouldered their equipment into Middlebury on Thursday evening.

President Moody knelt gracefully before the King and Queen Thursday night at the Coronation Pageant, and the Carnival was on. From then on a panorama of colorful indoor and outdoor sports swept across the campus carrying a mob of appreciative merry makers through the realms of musical comedy, costume balls, and up into the sobering sweeps of Lincoln-Warren Pass.

For Mahomet had to go to the mountain. True, there was enough snow on the flats so that by careful nurture and collection it was possible to pack the ski jump to jump-ability. But the cross-country and slalom courses took on a pallid appearance as the sun rose higher Friday morning; the doctor recommended a cooler climate and a higher altitude, and Lincoln-Warren Pass combined both with the added attraction of a suitable snow diet. Friday's outdoor events ended with the New Hampshire ski men leading the favored Dartmouth B team, and Middlebury pressing close in third place. On the women's side of the campus a good time was had by all in the "Women's Jubilee" staged on the slippery broadside of New Chapel hill, with the Middlebury girls putting up a good front in ski and snow-shoe games with Skidmore, Vassar, Connecticut, Jackson, Storrs, and Syracuse.

Friday night something new in the line of entertainment was offered in the form of "Bavarian Night," an original musical comedy, written and produced by students. A new attendance record was set, only to be broken on the following night when a mob of alumni, students, competitors and visitors reaching well over a thousand thronged into the gym for the "Klondike Rush," an ultra-informal dance. At the height of the dance New Hampshire was announced as the ski winner, with Dartmouth and Middlebury following.

Miscellaneous events of the week-end: Coach John Nash won his fifth hockey game of the season and lost his second, to the Alumni and Colgate respectively. The basketball team was nosed out of the Green Mountain Conference race by St. Michaels to the tune of 32-27. The Kappa Delta Rho fraternity won the snow-sculpture cup, with D.K.E. as honorable mention. All-time honors to the student body and co-operative visitors; they grappled with Nature and won.
THERE is in Middlebury a curious and unique monument in stone whose reason for being must have puzzled and possibly amused passers-by for many years. It is a flagstone which roofs the culvert in the sidewalk on Weybridge Street, some fifty yards north of the Play-house (the old Catholic Church) on the opposite side of the road, and bears the inscription "Orin Abbey 1877."

It looks like a tombstone. It never was that, but yet it was by deliberate intent a sort of monument to an extraordinary man, or more accurately I should say to a rugged virtue which we like to think was characteristic of the pioneers of Vermont.

The "dedication" of this memorial took place sixty years ago come next summer and I am certainly the only witness of it. The ceremony was becomingly simple, but for me it was solemn and deeply impressive. Old Captain Abbey delivered the oration and I was the audience. The audience was strictly enjoined to remember what was said, and this injunction has been conscientiously obeyed.

My story would lose its whole point if I were not allowed to sketch briefly the chief figure in this episode, Captain Orin Abbey. The date 1877 is some years back, but the Captain was of a type cast long before that. He belonged to the old pioneer days. He had a wide reputation as a trapper of bears and wolves, and bears and wolves were a scourge to the farmers when he was a young man; the bears devastated the cornfields and the wolves ravaged the flocks. As an old man he continued trapping for furs in the spring and fall and often took me on the rounds of his traps. Since then I have seen and admired many refined scientific techniques, but I still take off my hat to this man who could outwit a fox and catch him in a steel trap.

His regular occupation changed with the seasons, like the pelage of the wild animals. In the spring and fall he attended his traps. In the winter he operated a little shop in the lane between Weybridge Street and "Frog Hollow" as a locksmith and gunsmith. I can still see the old shop filled with long-barreled muskets and steel traps and especially the vicious bear traps, which even then were in use, with the horrible teeth in the jaws, that you dreamed of at night; and the silent old giant working the bellows with one rhythmic elbow while his attention and both hands were occupied with the glowing metal in the bed of coals. Here he would make wonderful blades for jack-knives when we boys by swapping could acquire especially good handles; and tomahawks also for small boys to kill Indians with. I still have my tomahawk and it still reeks with Algonquian gore. The significance of all this is that the knife blades and the tomahawks, although made for youngsters before their teens, were nevertheless of the very finest steel and temper as though made for the President of the United States. For the Captain was no respecter of age or rank. He never condescended to a child, never toadied to a man. He was far from being erudite, but he seemed the incarnation of physical and moral strength and self-reliance, of primitive sagacity and wisdom and utter integrity, and he seemed possessed of a serenity and fearlessness which must have rested on a good conscience.

In the summer season he took on the role of stone mason, and this brings me immediately to the explanation of the flagstone in the sidewalk. As he was putting the stone into place on finishing the culvert he called me over to him (I was then a lad eight years of age) and carefully explained that when he built a thing of stone he "built it to stay," whether it was the foundation of the big schoolhouse or just a little culvert in a sidewalk, and then he said: "Bert, I have cut my name and date in this stone, 'Orin Abbey 1877.' The stone is exactly level now and I want you to come back here fifty years from now and look at it, and you will find it will not be one quarter of an inch out of true." Fifty years later I did come back and, standing there alone with head uncovered, indulged in a moment of reverie. His prediction had proved to be entirely correct. I hope he knew it and I hope he took as much satisfaction in that knowledge as I did.
A Little Wilderness in Vermont

By Walter Prichard Eaton

For many years I have taught at the Summer School of English at Bread Loaf, Vermont, which is housed in the old hotel built by Joseph Battell, and left by him to Middlebury College, along with some 35,000 acres of mountain forest, a good bit of it virgin timber—i.e. true wilderness. He left it with such restrictions that the timber could not be stripped, and when the College sold the forest to the United States recently, those restrictions no doubt carried over. At one point, on Mount Lincoln, the holdings rise above timber to over 4,000 feet. Bread Loaf mountain itself is 3,800 feet. Through the heart of the forest, and over both summits, goes the Long Trail. In all the extent of the holdings but two roads cross the divide, one of them too difficult for motor cars. (Of course, the proposed Sky Line parkway would have traversed the entire length, but that, praises be, has at least temporarily scotched.) Out of this wilderness, on both sides of the range, brooks descend converging on their way down till the united streams are powerful enough to have carved deep, wild gorges. I have never seen these brooks dry. The valleys below may be parching, but half a mile down from the extreme head springs the brooks have always gathered up enough water for a cool, clear flow. I have seen them much less often in flood-time, but on one or two observed occasions of torrential rains they have not become turbulent and destructive till they reached areas of cleared fields or cut-over land.

One of the great charms of Bread Loaf is that with only an hour or so of spare time, you can still stroll out into wilderness and lose yourself in the silence and loveliness of a northern forest. With a day to spare, you can quite literally lose yourself if you forsake the trails. Close to the Inn—not a ten-minute walk—a large brook flows down a ravine, a golden-brown trout brook lined with gay borders of Joe-pye weed and tall coneflowers. The side of the ravine toward the Inn must once have been cut over clean, and is now clothed with a solid stand of spruce, under which nothing grows and where there is constant erosion. On the other side is a totally different forest, which has never been cut, and which, save for a trail along the brook side, is a beautifully handy illustration of the forest primeval.

Perhaps the first thing you notice in this piece of forest is the much smaller number of large trees on a given area than you find, say, in the spruce stand opposite. The large trees, however, are large trees, sending up straight, beautiful, limbless trunks for more than fifty feet before they begin to unite into a ceiling. The second thing you notice is the mixed nature of the stand, with deciduous trees predominating. Yellow birch, sugar maple, hemlock and, of course, the characteristic spruce of the north woods, are the chief varieties. At this point there is no balsam, and no pine. The under-forest contains seedlings of all the varieties, with numerous striped maples, shrubs, ferns, and other green floor cover. The higher cover is seldom so dense that it is difficult to walk through, and is frequently quite open, with an exquisite carpet of northern wood sorrel.

Probably the third thing you notice (or perhaps it is the first if you have strolled down from the Inn in your ordinary foot gear) is the dampness of the forest floor. No matter how long it has been since a rain, the floor is always cool and moist, and in low places, or at the foot of steep banks, is frequently decidedly wet. If you get off the trail, to experience the “feel” of the floor under your feet, you at once detect its spongy nature, and frequently you will find yourself stepping on what looks like firm moss, only to have it cave in under you, letting you down anywhere from an inch or so to a foot or more, into a mass of decomposed wood. Here in the virgin timber the black mould of the actual floor is seldom visible except on the trodden trail. It is overlaid with dead leaves, rotted sticks and logs, moss, fern clumps, all manner of vegetation.
alive or in process of decomposing. The over-lay acts, of course, like a perpetual sponge to hold water and give it down slowly to the brooks. It is also perpetually building soil. How important a part the down timber plays in this process is everywhere apparent to the eye, because when a fallen trunk has become thoroughly rotted it is converted into a fifty-foot, luxuriant fern bed, or even a bed of orchids, and the long mound it makes on the floor is conspicuously richer and moister than the surrounding soil.

Much of the Battell Forest is similar in nature to this small section. Of course, on the higher levels there is more spruce, but even at 2,400 feet, where the Long Trail crosses the Middlebury-Hancock road, the stand is decidedly mixed, and the biggest trees are almost always ancient yellow birches. (There is a yellow birch close to the 3,000 foot level, which is twelve feet in circumference at breast height.) There is a pretty little wilderness pond at the top of the pass, and under the very shelter of the divide everywhere you come upon swampy hollows, sometimes filled with showy lady’s slippers.

With the cross motor road, the north-and-south Long Trail and several side trails, this bit of true wilderness is as accessible as it ever needs be. Quite aside from its esthetic appeal, the incomparable beauty of its unspoiled richness, its wild flower and bird life, all those portions of the forest which are primeval should be kept free of all lumbering, all roads, and above everything, perhaps, all “improvement,” so they may forever serve as a handy example of Nature’s methods of conservation and renewal.

I say “all improvement” deliberately, thinking of a dozen examples I could name of work done (with the best will in the world, no doubt) by CCC gangs, or by men put into wild corners of public parks and the like. I have in mind a certain steep mountainside covered with fairsized second growth, much of it chestnut, which of course had died. Lacking other chores, a CCC gang was put in here to clear up the woods under the direction of the Federal Gypsy Moth Control gang. They chopped down all the dead chestnut, cut all the laurel and hobble bush and other floor cover to the ground, and making heaps of the debris proceeded to burn them. Many heaps were burned on top of beds of arbutus! Before they were stopped, the gang had “improved” about twenty acres, converting a wild mountain forest to an imitation of Central Park, removing future soil material, destroying the soil cover which conserves moisture, and getting that section of slope all nicely prepared for erosion at the next Spring flood.

I have in mind, too, a bit of work on a bank bordering a Massachusetts State highway, which was proudly purchased for a park by the village, and into which a gang of men were sent to clear it up. They, too, burned all the dead wood, raked up all the sticks and leaves, cut down all the brush—and one short year later that bank was already full of gullies six inches or more deep, and had become an eyesore.

The whole idea that you are “improving” your woods by clearing out the underbrush and removing the dead and down timber is absurd on the face of it, as anybody can see who has ever wandered in a real wilderness. And on all slopes, of course, the retention of water and the prevention of erosion is almost entirely dependent, not on the presence of large trees, but on the mechanical condition of the forest floor, on a spongy overlay of vegetation in various stages of decomposition, shaded and kept constantly from drying out by the living vegetation just above it. You can see the same thing on the English moors, where there are no trees at all. It is my pious prayer that no CCC camp will ever be put into the Battell Forest, but that the primeval portions of it be kept as a vivid illustration of how the woods renew themselves and water the land, and the other portions be handled in such a way as to bring them as speedily as possible into wilderness class. After all, 35,000 acres, which Joseph Battell saved from the axe as he hoped forever, are not much to keep out of the lumberman’s hands, and out of the motorists’ clutches, both as object lessons in conservation and soul solace for lovers of the wild.

Note: This article is reprinted from “The Living Wilderness.”

A limited number of Middlebury College General Directories for 1927 may be secured from the College Library at $1.50 each.
From Seven Centuries and Seven Seas

By Harold S. Sniffen, '31, Assistant to the Superintendent, The Mariners' Museum

At the stroke of eight bells, midnight, the figurehead Dolores looks about this strange place in which she finds herself. Instead of being mounted upon the graceful bow of a ship she is fastened upon a wall. She feels very uncomfortable in such strange surroundings where there is no sound of water, no smell of salt and no motion of a ship. Her discomfort is soon relieved, however, by the sight of a familiar face. There is the figurehead Coriolanus whom she met coming out of Boston harbor, and Commodore Morris whom she saw cruising about on the whaling grounds, the Mermaid with her glistening scales, and others. So many of these acquaintances are present that they all come down from the wall and gather to discuss experiences of the past and the coincidence of their present meeting. But with the dawn, and as a figurehead might say “with the first cry of a Mother Carey’s chicken” they hurry back to the walls to resume their graceful poses.

These figureheads, having spent their days roaming the Seven Seas and gathering romance about themselves, have finally found their way into The Mariners' Museum, near the Virginia coast, where with other relics, they hold for the future, something of the spirit of the sea.

Many people have the idea that the scope of a museum specializing only upon nautical subjects would be limited. To persons with this idea a visit to such a museum is revealing. Art, science, and industry have been profoundly affected by the sea and at The Mariners' Museum a surprisingly large number of tangible objects are being collected to illustrate this truth.

The nautical atmosphere is felt upon approaching the museum building. Ship's bells, ship's cannons, and bollards are among the exterior exhibits. Anchor chains mark the borders of grass plots. The front wall of the building is lined with old anchors. Bronze relief doors suggest man's conquest of the sea.

The main exhibition hall is a room 150 feet in length. In the center is a large carved eagle, the figurehead from the U.S.S. Frigate Lancaster. Other figureheads are placed upon each pilaster of the room. Upon the walls are hung oil paintings of marine scenes and vessels covering an historical range from the galleys of the 15th and 16th centuries, through the age of the graceful clipper ship and up to the most modern aircraft carrier.

Everyone derives delight from things in miniature form and of all types of miniature art, that of building ship models is one of the highest. Skilled workmen spend full time in a shop completely equipped for the purpose, building with painstaking care models of all types of ships, which are placed on display in the museum. These with others obtained elsewhere comprise a collection of over 60 ship models, ranging in type from the caravel of Columbus to the modern...
liner S. S. President Hoover.

Displays of the instruments of navigation form a fascinating section of the museum. The indispensable compass is well represented. There is a case of barometers, the heralds of the weather. Those instruments for "shooting the sun" in ascertaining one's position at sea, from the ancient astrolable and the cross-staff of Columbus' time to the more modern sextant are exhibited. Correct time must also be known in computing the location of a vessel, so the chronometer, the most delicate and precise of timepieces, finds its place among nautical instruments. Also there are logs for recording distance traversed and sounding apparatus for finding the depth of water, and other instruments used in the science of navigation.

A portion of the British fleet was blockaded in the York River at the time of the siege of Yorktown in 1781. Rather than allow them to be captured the British burned and sank their ships. Over 150 years later a diver jetted his way into the mud at the bottom of this river and groped about in the opaque blackness of the muddy water until he contacted object after object from these old vessels which eager and curious hands pulled to the surface. Among the relics raised and on exhibit are anchors, blocks (some of them still in working condition), cannons and cannon balls, musket stocks, candle sticks, jugs and rum bottles. So numerous were the latter that once the diver, having just found a great many of them took off his helmet and said, "This ain't no battleship, it's a bottle-ship. No wonder they lost the war." Time has increased the beauty of these hand-blown bottles for the chemical action of the water and mud has acted upon them so that light is reflected from them in beautiful iridescent colors.

Among the more outstanding specialties of The Mariners' Museum is its collection of prints. Our modern means of reproduction make it simple to hand down to the future the record of the present. In the past these methods of reproduction were a great deal more tedious, therefore, more to be admired and in most cases more artistic. The walls and files of The Mariners' Museum contain over 1500 engravings, lithographs, and aquatints depicting all kinds of maritime scenes, including naval ships and battles, merchant ships both sail and steam, yachts, whaling scenes and harbors. In this latter class the collection excels.

The colorful history of the Champlain Transportation Company, gives the state of Vermont a rightful claim on its share of the maritime heritage of this country. With the success in 1807 of the steamboat Clermont, (of which the museum has a splendid model) it was decided to build upon Lake Champlain a similar boat. The Vermont was completed in 1809. From that time to the present day steamboats have plied the length of the state of Vermont. Among them was the Burlington built in 1837. Charles Dickens made one of his few complimentary remarks about this country when he said of this steamboat, "It is superior to any other in the world." Among other things from this boat The Mariners' Museum possesses the barber chair in which, it is said, Dickens was shaved!

One room of the museum is devoted to shipbuilding tools and ships gear. In another portion may be seen implements used in the whaling industry, including a fully equipped whaleboat. In this connection there is a fine display of examples of that unique and original form of American folk art, "scrimshaw," the decoration and carving of ivory and bone, done by sailors, mostly whaling men. Other miscellaneous exhibits include marine china, ships furniture, medicine and liquor chests, guns, swords, and other naval ordnance, lanterns and lights, speaking trumpets, fog horns, telescopes, and souvenirs from historic vessels such as H.M.S. Bounty. In a courtyard and upon the museum lake may be seen over 40 different types of small boats, including a Shanghai Harbor [Continued on page 19]
Is There a Contemporary Civilization

By Waldo Heinrichs, Associate Professor of Contemporary Civilization

PRESIDENT MOODY had given me carte blanche, in the summer of 1934, to give a freshman orientation course in Contemporary Civilization at Middlebury College. How often since then I have asked myself, in view of the daily reports of revolutions, strikes, riots, wars, abdications and broken treaties whether there is any such thing as civilization and grave doubts constantly recur as to the existence of any remnant of it which could be called contemporary. The college textbook market is flooded with excellent postwar histories; 1918 seems to have marked the end of a world epoch. But for interest in daily happenings which seem to pop at every sunrise, the course needed to center around a great metropolitan newspaper rather than a textbook, out of date as soon as it is published. We therefore selected the New York Times as our textbook and decided to build up the background of recent events in class lectures dealing with post-war economic, historical, diplomatic, military and political developments. Needless to say, serious college students in a chaotic world need to tap the resources of information that are available on other pages of the Times than those which deal with debutantes, sports and the accounts of gruesome murders and kidnappings. There is much news that is fit to print and the foreign staff correspondents are an able and brilliant group of commentators. But however excellent they may be, they leave countless current questions unanswered and, after all, their impressions are largely personal. The payment of the Soldiers’ Bonus, which I have always opposed, made a trip to Europe possible financially, opportune chronologically, and justifiable ethically, since the results of such a study trip eventually get to the student. The Sherwood Eddy annual European Seminar was chosen as the agency and the writer feels that no better can be found.

Four days on the “Queen Mary” in third class, and ten in England without any class, should provide the British viewpoint in answer to such questions as “Why this heavy rearmament?” “Why the worst diplomatic defeat in centuries at the hands of a second-rate schoolteacher?” Brailsford said Britain was disarmed and unprepared; Ratcliffe, that she was overwhelmingly opposed to a general war; Arnold-Forster said it was due to Cabinet vacillation and divided opinions. Three great writers in disagreement. “What causes Britain’s amazing prosperity immediately after the world’s worst depression?” “What is going to happen to the depressed areas that gave such grave concern to Edward the Eighth before more pressing, but hardly more important, personal problems intervened?” “Or did the latter give a pretext for the former? What about the New Indian Constitution, Mahatma Gandhi, the National Congress and its avowed Communist leader?” G. D. H. Cole, Sir Arthur Salter, Morrison, Major Atlee, Ramsay Macdonald, Lord Irwin, Lord Lytton, Lord Robert Cecil, Irene Ward, and some Indians studying in London gave their interpretation of British colonial and imperial policy which served to create syntheses out of many theses and antitheses.

France, under her first Socialist premier, the wealthy, aesthetic Jewish socialist Leon Blum, who graciously received and interviewed a half dozen of our party, is a very different France from that of Clemenceau, Poincaire et Cie. I asked him, “When will you devalue the franc?” He replied that French premiers had evaded that action, which all recognized as inevitable, for more than five years, but he hoped to do it before the end of the year. He did so actually three months earlier. Courageous leadership. I asked him when he was going to reorganize the Banque de France. He said, “Tomorrow,” and “Behold it was so.” The question and the action were diplomatically unrelated, but amazingly coincident. On Bastille Day, the great military parade swept across the Champs Elysees, not down it as previously announced. I wondered why. Croix de Feu and Front Populaire were both on tenterhooks. It was all much like 1918, but it left no question in my mind of French unpreparedness—war will be more rapid, more deadly, more frightful, but France is ready! That afternoon at
the Bastille we saw the parade of over 700,000 members of parties in the Front Populaire, from fat deputies of the Radical Socialist Party (neither radical nor socialist) to the extremest Communists, but singing at the same time and in the same parade the “Internationale” and the “Marseillaise.” It was all incredible. And that night Dr. Nicolai Berdyaev spoke on the Philosophy of the Russian Revolution, himself a refugee from it.

I felt guilty about using the Ehrenpass I had whangled, to attend the opening of the Olympic Games, after I had raised my voice in protest at American participation under the auspices of Nazi Germany. But such chances come once in a lifetime and rationalization is easier than ineffective protest ex post facto. That stupendous, thrilling ovation to the French team as it marched past the reviewing stand in the Stadium, even from the packed stands of the not over-shy, brown-shirted Storm troopers was overpowering, but what a disillusionment when, next day, I heard that the Germans had mistaken the French Olympic salute before the Fuhrer for their very similar Nazi salute! And that disgraceful and deliberate insult by an Aryan of doubtful lineage to our greatest of all American athletes, Jesse Owens! “No racial discrimination, no political propaganda!”

I never felt more personal satisfaction in muttering “I told you so.” Certainly it was worth the whole trip to see Hitler, Goebbels, Goering, Hess, von Schirach, and von Blomberg all in one closely seated row hardly a hundred feet away.

How about the German standards of living? A well informed American economic expert, resident in Berlin, said he could prove a 15% decline over 1929, and feared it was 25% down. It could last from six to eighteen months—then an explosion such as Schacht has threatened. What success in the mad effort of a great industrial nation to become economically self-sufficient in order to wage another destructive war? How about the German effort to purchase foreign exchange? I wondered why G. D. H. Cole had refused to answer that question for me. He certainly must have known the answer. German gold coverage has vanished to almost zero. Which of these truly big shots calls the tune? What personal rivalries and jealousies, Air Force vs Army, diplomat vs soldier, Ph. D. vs drug addict, aristocrats vs paperhangers? Of course before 110,000 “Yes-men,” everything was honey-sweet.

I had never even been in the vicinity of Russia before, and we did 3,000 miles in the area along the Eastern borders. What a vast country! Many have asked “Is the Government stable?” The answer is “Yes” so long as the Ogpu and the army are in the party’s power. How then can one explain the hysterical press campaign against the counter-revolutionaries led by Trotsky, Zinoviev, and Kamenev? The sixteen traitors (except Trotsky) faced a firing squad in Moscow while we were in Kiev. Then Trotsky has to find refuge elsewhere than in Scandinavia. Now, as I write, it is Karl Radek’s turn. How did they secure those full confessions? Pressure and threats against their loved one’s lives. As brutal as kidnappings? We found it too easy to compare the Russia we saw with America or France, or even Germany and Poland, because we had not known the Russia of 1914 or 1922, or even that of 1929. But their trend is definitely on the up and up, some experts claim 30% better off than in 1929. What will happen when the Russian upward curve passes the much higher but declining German curve? Emphasis on the heavy industries has laid the foundation for a great industrial expansion. Russia has jumped in a decade from 8th place to 2nd among the world’s industrial nations. They are working at 100% capacity, we are producing only at 60%. Why close our eyes to such facts? Enormous untapped natural resources, unlimited and sparsely populated land, a population increasing at the rate of four million per year. I saw in Moscow recently mined nuggets of pure gold larger than a basketball, and understood how she now rivals South Africa in gold production. No wonder Hitler wants a slice! But an American authoress wondered which would come first Socialism in America or Efficiency in Russia. No one could fail to catch the tremendous enthusiasm of Russian youth,—no disillusionment, no cynicism, no doubts about the future of the Socialist experiment—they were sure of themselves—too cocksure I thought. Surely no government which doubted its own stability would enfranchise everybody, even its former arch enemies—the kulaks and the priests. But that awful repression, one breathes a freer air outside. Everybody missed the Russians at the [Continued on page 19]
Des Souvenirs Divers

Charlotte Moody

In the Saturday Review of Literature for 19 December (1936) Mr. Bernard DeVoto sounded a clear, clarion call in an editorial entitled "Reading for Pleasure." Among other wise things, he said: "One thing you conspicuously have not got from the season's fashions is pleasure in reading. The model 1936 literary person would rather be found dead or caught attending a Browning Club than entertain you. Don't be a softie, fiction has other and more serious business which usually turns out to be competitive with Consumers' Research."

Spurred by this exhortation, we have done a little consumer's research on our own, object pleasure. And pleasure was found in the form of pure entertainment in a book recently out* and in a book published in 1903**. Both of these are volumes of letters written by American gentlewomen in the last century. These women were contemporaries, in fact their fortunes impinged on each other briefly when Henry Adams wanted permission from M. Waddington to explore French official archives. Both these women were enchanting, pleasant, good mannered, intelligent, observant, and humourous.

Mrs. Adams' letters cover two trips abroad and two stays in Washington. The Adams knew Everybody. Everybody in Washington, everybody abroad. James Russel Lowell stopped to see them in London on his way to Oxford to get a degree and they saw a great deal of him later in Spain. Henry James dropped in often. Mrs. Adams sat next Browning at a dinner party ("nice enough," she said, "but not thrilling"), but they would not receive Oscar Wilde when he came to Washington. They shopped for silver and china and linen and notably for pictures. Mrs. Adams' Joshua Reynolds turned out to be genuine, her water colours rose in value. The most notable element in her letters is her complete honesty and frankness. ("Lady Salisbury has the manners of a discouraged cook, and is not popular"). She is not at all impressed by great names or great dinners. "We are hidden cordially to Yorkshire for a Christmas visit, to Shropshire at Whitsundide, to Tunbridge, Warwickshire, etc. etc. but once we get fixed in a decent house in Mayfair with a rough haired black Skye, this child will not lightly nor advisedly intrust her small stock of animal spirits to the gloom of English country-house life. In novels it's charming."

Not that she is above the minor matters of food and dress: when coming home she writes, "Spare the calf—seems to me the worst that ever befell the unhappy prodigal was to have VEAL for dinner when he did go home," and of a new dress she says: "My Worth gown has come home and not only fills my small soul but seals it hermetically. What doesn't show is as good as what does, so that when the right side is worn out I shall simply wear the wrong side out. For Betsy's carnal mind I enclose a pattern of the stuff. She will see that the colours suggest a serious peacock. I found Mr. Worth respectful and sympathetic. Alice Mason de-

clares that he is habitually drunk, to which one might retort as Lincoln did and suggest that a little whiskey of his kind to some other dressmakers might not be amiss." She is completely individual in her expression: "We did not wish to suck our paws in Alexandria for four mortal days," "The best thing about a French steamer is that you don’t see a British lion in every teacup and washbowl and the food is so good," "A New England pig would sicken at the stuff we have to eat." Most of the letters are to her father and reveal a delightful relationship.

Mary Waddington's letters deal with two great events in her life; when her husband was appointed Ambassador Extraordinary in 1883 to represent France at the coronation of the Czar Alexander III and she accompanied him to Moscow; and her ten years in London when M. Waddington was Ambassador at the Court of St. James. While her London letters make fascinating reading, including as they do pictures of Queen Victoria, the royal family and relatives, London seasons, affairs of state, diplomatic gossip and unfailing descriptions of the dresses she wore, her letters from Moscow and St. Petersburg are perhaps even more interesting for they tell of a society that is gone more completely than has the London of the nineties. She was in constant terror of nihilists and bombs at the coronation, but she wouldn't miss anything and she didn't miss telling anything: the gold plate, the flowers, the livery, the dresses, the state carriages, the plumes, the jewels, "everything handsome and correct." "The ballroom is handsome, a parquet floor, and yellow satin furniture; the other drawing rooms too are well furnished in silk and satin. The dining room is small, but the serre will make a very good fumoir where the gentlemen can sit and smoke. It has nice cane arm chairs and tables, and will be a resource," she says of the French Embassy in Moscow, and of the coronation procession, "Bells going all the time (and the Moscow bells have a deep, beautiful sound), music, the steady tramp of soldiers and the curious, dull noise of a great crowd of people."

Quoting so freely was meant to convey some idea of the charm of these books. Nothing can convey the deep sense of shame that pervades one after reading them. These women couldn't have written a dull note thanking someone for a bookmark received at Christmas. Their letters conveyed something of themselves and of what they did and what they saw to their friends, just as they convey all this to us, across the years. Is anybody writing letters like that today?

**Letters of a Diplomat's Wife, Mary King Waddington, Charles Scribner's Sons, 1903.
SOMANY halos have been pasted about the head of Gamaliel Painter that they have all but obscured the man himself. He was indeed the George Washington of Middlebury, the patron saint of the College, the father of the town. But he certainly was not the erudite gentleman, the mellow statesman, the pious theologian—characteristics which have accumulated about him like a thick aura. He was literate, but neither cultured nor educated. He was more the quiet politician than statesman, more the lobbyist than politician, more law giver than lawyer, a homespun diplomat, slow of speech, but public spirited, generous, farsighted, but above all possessing unbounded energy balanced with a fund of uncommon Yankee ingenuity, tact, and wisdom.

Although Painter was born in 1742 in the very shadow of Yale College, he had no contacts with New Haven scholarship during his early years spent there. His meagre common school education was to serve as academic background for later life among educators in the cause of education, among capable lawyers, pastors, and statesmen less wise than he. But he was given to adventure, he had the scientist’s urge to conquer the unknown, to subdue the untamed, to win over for posterity some of the wilderness acres of New England.

In those years when the makings of revolution were stirring the colonists, when future freedom and democracy seemed not so sure in southern New England, little bands of pioneers had been setting out from Connecticut villages bound on a week or two weeks journey to the far north, to establish communities where their own law would be unquestioned in the foothills of the Green Mountains. Whether it was in New Hampshire or New York where they built their cabins, there was grave disagreement. In the meantime the Salisbury Chipmans and the New Haven Painters had become fast friends. Gamaliel had married John’s sister Abigail, and in 1773 the group with their goods and chattels trekked back along the Otter Creek to the present site of the Three Mile Bridge. Though Chipman had established first lien in Middlebury territory, Painter’s log cabin was built first, out of deference to the mother and two small children aged three and four years. And the adjacent Chipman cabin soon followed.

No sooner were the rude shelters completed than the further clearing of land and planting began. But most of the outdoor labor that year and the next fell to Abigail and what hired help could be secured. Gamaliel was too busy planning a future town. Whether or not he had ever had any special instruction in surveying, much of his time was devoted to laying out farms and marking off the future highways of the region.

Work on gardens and surveying was cut short in the middle of the third season when word arrived from the north that Indians and British were advancing in the direction of Middlebury. Because of the strong position he had taken in the establishment of Vermont as an independent state, Painter had already become recognized as the political leader and went off to Dorset to adopt incipient measures for a declaration of independence.

His family meanwhile was bundled off on a raft along with the flotilla of other families to paddle their way to the fortification at Pittsford. And later while the homes were being pillaged the long retreat back to Connecticut began.

But Painter was not among those given to immediate flight. He stayed to represent the interests of Middlebury at the Windsor Convention in July 1777 when the first State Constitution was formed, and then as a captain in the Revolutionary forces allied himself with Ethan Allen, Seth Warner, and Remember Baker. His craft made him the natural spy, of inestimable value to the military leaders of the new State.

Not until the British forces under Burgoyne had obtained control of all western Vermont did he leave the State—forced to make his retreat over the mountains along the Winooski River and then south on the east side of the state. Further details of his activities in the War are unknown, but it is most unlikely that he went into retirement.

As soon as the last clouds of the war had blown over in 1783 and ’84, Painter and his family trooped back to Middlebury along with a procession of newcomers. And with greater assurance that a permanent home could now be constructed, a better frame house was built. But hardly had it been completed when a dispute arose over the town boundaries of Salisbury and New Haven. The Surveyor-General had to recheck the area and moved the south line of New Haven forty rods north and the north line of Salisbury as many rods north. This was a significant note in the history of both Gamaliel Painter and the town of Middlebury—for all but thirty of Painter’s two hundred acres vanished from the map. But the proprietors granted him “the privilege of re-pitching land in lieu of
what was cut off by said line" and accordingly the following pitch was made in 1786:

"Beginning at a cherry tree, which stands forty links from the bank of Otter Creek, thence east 5 chains and fifty links to a stake near a red ash tree marked, which is the southwest corner of a two hundred acre pitch laid out to Joshua Hyde on the original right of Moses Reed, thence east on the south line of said pitch 26 chains and 50 links to a maple staddle, thence south 34 chains and 50 links to a hemlock tree, thence west 12 chains and 75 links to an elm staddle standing on the bank of Otter Creek, thence following down the creek, as that runs to the bounds begun at."

Always with an eye for turning disaster to account, he had secured a hundred acres on the east side of the falls, comprising virtually the whole site of the present village of Middlebury. Painter was a small town economist as well as a business man. He knew that any growing community would have to have mills—grist and saw mills. And the mills would have to have water power. People would soon tire of driving their logs and grain for miles to the falls and would gradually want to make their homes nearer the center of "industrial" activities. Already a rough mill had been built by Daniel Foot, and roads to the falls were heavily trod. By the fall of 1787 he had built a shanty in the midst of the "thick and gloomy forest of hemlock and pine" that covered the slopes about the falls, and moved his family to the new residence. The same year he put into operation a saw mill and the following year a grist mill.

Had Painter remained at the south end of the town, it is not at all unlikely that even today the wind-blown "Seeley District" and the River Road (Love Lane) would be lined with residences, churches, and small town stores, with the College spread out in some isolated field. But where Painter went others followed. Disciples came after the leader. In a relatively short period, lots in the following year a grist mill.

Lots for a tavern, a printing office, a hatters' shop, more mills, a silversmith shop, real estate and law offices, a blacksmith, a physician, a brewery, a tannery, an assortment of stores, and dozens of building lots were sold "to worthy immigrants." Addison was the county seat, but as early as 1791 Painter remarked to a prominent citizen "This is the place for the court house." Land was accordingly given for the structure and shortly the county seat was changed.

In the meantime Painter was subject to the same pioneer trials and disasters which others in the community felt. His Middlebury home was burned and another had to be built. Famine struck the town in 1790. The shortage of grain was so great that the women had to go into the fields, cut off the heads of wheat before it was ripe, dry and shell them for food. Practically the only source of animal food was fish taken from Lemon Fair. Many of the men even were so enfeebled from hunger that they were unable to seek food and had to depend on the efforts of the stronger. Others subsisted on wild leek, bark, and berries until grain arrived tardily from Connecticut.

Whether from famine or some other cause Mrs. Painter died during the year. A raft was made by lashing together two canoes and spreading boards over them. On this the corpse was placed and, surrounded by mourners and friends, it was propelled up the creek, while the other townsfolk walked along the shore. To add informality to the pathos of the scene, the boats leaked and the mourners, having no pails, had to bail the boats with their shoes. The body was laid to rest in the burial ground near Painter's original home—without benefit of clergy. And within a few years both his grown sons followed the mother to the cemetery.

Despite family troubles and heavy business of his own, he accepted ungrudgingly the public offices conferred upon him. He was one of the first judges, the first town representative in the State legislature, sheriff, a leader in the Congregational Society, and ever the philanthropist. Following the completion of one of his homes the whole town was invited to a Christmas celebration and eight lines of doggerel composed by one Samuel Bartholomew give something of the atmosphere of that party.

"This place, called Middlebury Falls
Is like a city without walls,
Surrounded 'tis by hemlock trees
Which shut out all its enemies.
The powwow now on Christmas day,
Which much resembled Indian play,
I think will never be forgotten
Till all the hemlock trees are rotten."

Painter's fifth and finest Middlebury home was finally completed in 1802, and its magnificence was symbolic of the position the owner had in the town. Perhaps Painter had in mind making a Connecticut New Haven of Vermont Middlebury. A Grammar School and College could not be eliminated from such a plan and he was one of the first advocates for establishing an educational center. As a politician of the day remarked: "The influence of Painter with his cunning, Chipman with his argument and Miller with his courteous address, if it were possible, would deceive the very elect." To this needs be added the brilliance of Seth Storrs.

The founding of Middlebury College would not have been accomplished in 1800 without the craft of the 'patron saint.' And the most brilliant example of cunning was his manner [Continued on page 19]
IS THERE A CONTEMPORARY CIVILIZATION

[Continued from page 15]

Olympics in Berlin. They told us in Moscow that they had not been invited! The very word "Bolshevism" puts Hitler into a cold sweat, but it was the German General Staff that released Lenin through their lines into Russia in 1916. One wonders when diplomats and soldiers will learn that a blow below the belt is bad tactics even in a war.

Then back through the Polish "corridor," arrest by the Polish police who mistook the American service button for the Russian star and couldn't understand how "U. S." could refer to anything else than "U. S. S. R." Visions of a Polish houseguest until a German speaking Pole, veteran of Arras, found I had once been an American flying officer; then the greatest possible friendliness and courtesy. Danzig and its 200,000 Nazis who hate everybody including themselves. No time even to transcribe lecture notes before machine-gunned the crowded retreating German troops. On you've seen or heard it first hand.

...sector patrols, only the roof and nave restored by the Rockefeller Foundation. Anyhow the classes listen better when they know the Kaiser put me up for two hellish months of agony. A visit to A.E.F. headquarters where I stood beside the grave of Big Bill Taylor, just a few kilometers away that hill beyond at Rembercourt had been the hangars of the First Bank of the Creek, or those favoring the College on Chipman Hill and on Storrs Hill. The struggle was long and deep seated. Only a Painter could have kept it in control. Petition after petition was circulated calling for subscriptions. And for every dollar, leg of nails, hundred feet of lumber, truck of labor offered by the growers he tried to secure similar gifts from the opponents. Then when the west contingent finally won, he succeeded remarkably well in reuniting the two factions and getting the east backers to donate their original subscription to the cause.

There was not a significant project in the early days of town and College with which Painter was not associated. In all the paragraphs of Middlebury history no character stands out in more bold relief. His greatest love next to that of kin was for the College and his modest fortune of $13,000 went to the institution which he had helped to found. He is the last person that we would expect to see posing as the aristocrat tapping with his cane Middlebury's uneven streets, but the work of Painter lives on— with or without the ghost sound of a tapping cane.

BOSTON ALUMNAE

On December 29th at the College Club, the Boston Alumnae Association entertained at tea the Middlebury students of the Boston area who were at home for the holidays. An informal tour of talking and meeting old and new friends was enjoyed, with piano music furnished by Elizabeth Howard Gordon, '26. A special feature of the afternoon was a cello solo by the young daughter of Harriet Myers Fish, '16. Tea was served around the Christmas tree which was tastefully decorated and lighted in silver, blue and white. The alumnae wish to continue the custom of the Christmas Tea, and hope many more members and guests will enjoy it each year. We credit Irene G. Rhodes, '13, of Melrose, with the distinction of bringing live music and one sub-freshman with her.

Alumnae present were: Alice L. Grose, '25; Caroline B. Williams, '13; Katherine H. Lamere, '16; Mary M. Starr, '14; Beatrice S. McElwain, '25; Inez S. Abbott, '06; Elizabeth H. Gordon, '26; Marjorie McCann, '36; Madelyn Derrick, '27; Margarette Ellison, '12; Madeline F. Lancaster, '17; Mabel A. Spaulding, '12; Madeline M. Clark, '22; Henrietta Olsen, '31; Evelyn R. Russell, '32; Florence Griffith, '29; Frances H. Ramdell, '26; Isabel B. Prain, '21; Elizabeth C. Simmons, '24; Dorothy W. Fallon, '25; Barbara McElwain, '25; Ethelinda T. Cruiickshank, '23; Helen B. Homer, '24; Harriet M. Fish, '16; Evelyn P. Adams, '25.

NEW YORKERS DINE

More than one hundred men of the New York Alumni Association met at the Yale Club in New York City, on Friday evening, January 29. Edwin B. Dooley, formerly All-American quarterback at Dartmouth, and at present sports writer for the New Yorker as well as popular radio commentator, was the principal speaker. Mr. Dooley strongly endorsed Middlebury's athletic policy of playing teams within its own class and expressed the opinion that the small colleges had little to gain from competition with teams of the large institutions with the unlimited reserved asset. He complimented the Middlebury coaching staff and football team on making such an excellent record last fall yet without subsidizing the players.

Coach Beck explained the handicaps under which the Athletic department is working with the present inadequate facilities and stressed the need of supplementing the very limited gymnasium quarters. Captain "Bill" Craig, '27, related the experiences of the undefeated football team.

In his remarks on the state of the College President Moody also devoted some time to the policy of the College concerning athletics. He is strongly convinced that the high standards of the College in the field of sport must be maintained and pointed out the unusual excellent scholastic record among the athletic leaders. William H. Purdy, '26, reported on the work of a special committee which is aiding the College Editor's Office to secure wider cooperation from the metropolitan press in connection with reporting Middlebury activities.

Colored movies of the College were shown by Mr. Harry T. Emmons, '35, with Mr. E. J. Wiley, '25, acting as commentator. The singing was in charge of Henry Vail Brooks, '28 and Richard H. Bear. Donald D. Fredrickson, '25, made an excellent toastmaster for the occasion. The committee in charge of arrangements included E. F. Lang, '17; Chairman; H. V. Brooks, '28; D. J. Breen, '20; W. R. Wells, '30; P. Kasper, '20 (ex-officio).
Help Wanted

We have been unsuccessful to date in securing the addresses of the alumni and alumnae listed below and should greatly appreciate your cooperation in sending us either their correct address or a suggestion as to how the address may be obtained. Please direct your letter or postal card to the Alumni Office, 4 Old Chapel, Middlebury College, Middlebury, Vermont.

ALUMNI NOMINATE OFFICERS

Nominations have been made for five important offices in the Associated Alumni and members will be given an opportunity to register their choice by ballot later in the spring.

The three district stationed presidents of Region III which includes the Washington, Buffalo, and Chicago districts, complete their terms of office in June and automatically become candidates, at this time, for the national presidency. Judge E. C. Lawrence, '01, completes this year his term of office as alumni trustee-at-large and is not eligible for re-election at this time.

The nominating committee makes the following nominations:

For National President

T. H. Noonan, '01, Official Referee of the N. Y. Supreme Court, Buffalo, N. Y.

W. L. Barnum, '07, Assistant Principal, Evanston Township High School, Evanston, Ill.

For President of the Buffalo District—

H. O. Thayer, '13, Director of Cellulose Research, Technical Division, E. I. DuPont de Nemour & Co., Buffalo, N. Y.

For President of the Washington District—

C. H. Clemens, '33, Banking, with Mackubin, Legg & Co., Baltimore, Md.

For President of the Chicago District—

B. W. Sherman, '90, Lawyer, Chicago, Ill.

E. P. Calvert, '31, Banking, with Continental National Bank and Trust Co., Chicago, Ill.

For Alumni Trustee-at-Large—

F. P. Lang, '17, President, F. P. Lang & Co., Brooklyn, New York, N. Y.

J. P. Kasper, '20, Executive Vice President of R. H. Macy & Co., Inc., New York, N. Y.
